

Plans: MedPerformance; Amerus Ultimate EPO/PPO/HSA when included

National overview. The supplied Amerus Outlook email confirms Marpai administers medical claims, Cigna provides the provider network, and VerusRx handles pharmacy benefits. Ultimate EPO/PPO use Cigna PPO; the EPO design pays routine care in network only, while Ultimate PPO has OON benefits. Exact network configuration remains to be verified in member directory.

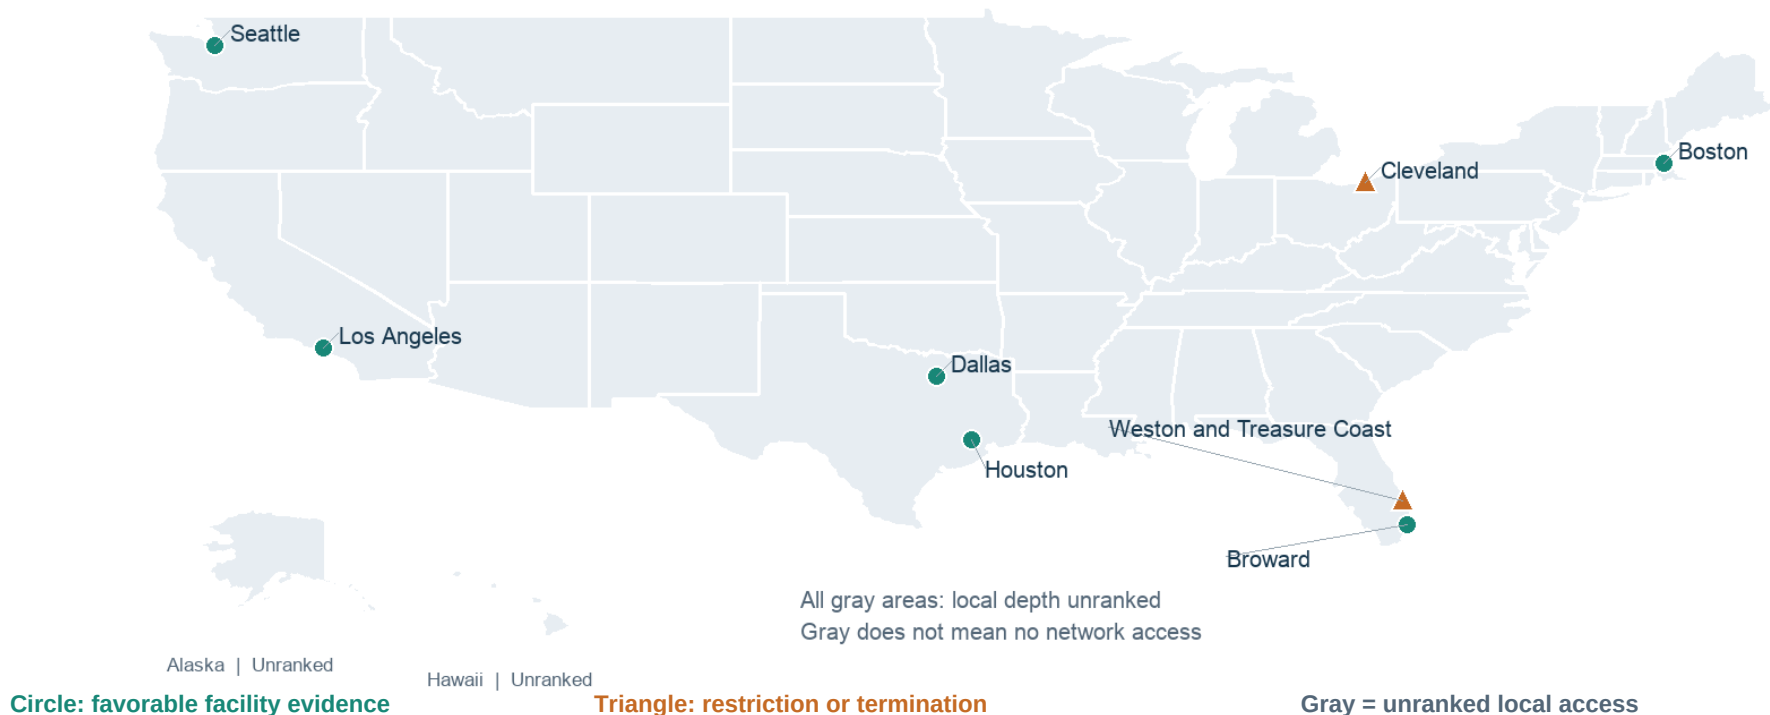

Where access is better documented. Documented hospital access examples span the West Coast, Texas, South Florida and Northeast Ohio: UCLA, UW Medicine, UT Southwestern, Houston Methodist Willowbrook, Broward Health and Cleveland Clinic list Cigna. These are favorable regional signals, not measured state rankings.

Gaps and least certain access. UW Medicine excludes Cigna Behavioral Health/Evernorth Behavioral Health. That service-specific exception does not negate its medical Cigna participation. Remaining states, Alaska, Hawaii, rural counties and exact third-party products have no density ranking in this review.

First Health PPO

With Amerus | 3 Oct 2026

Plans: MedMax; MedAccess; Everest AFEUSA Prime; Vault Elite Health Plus (primary)

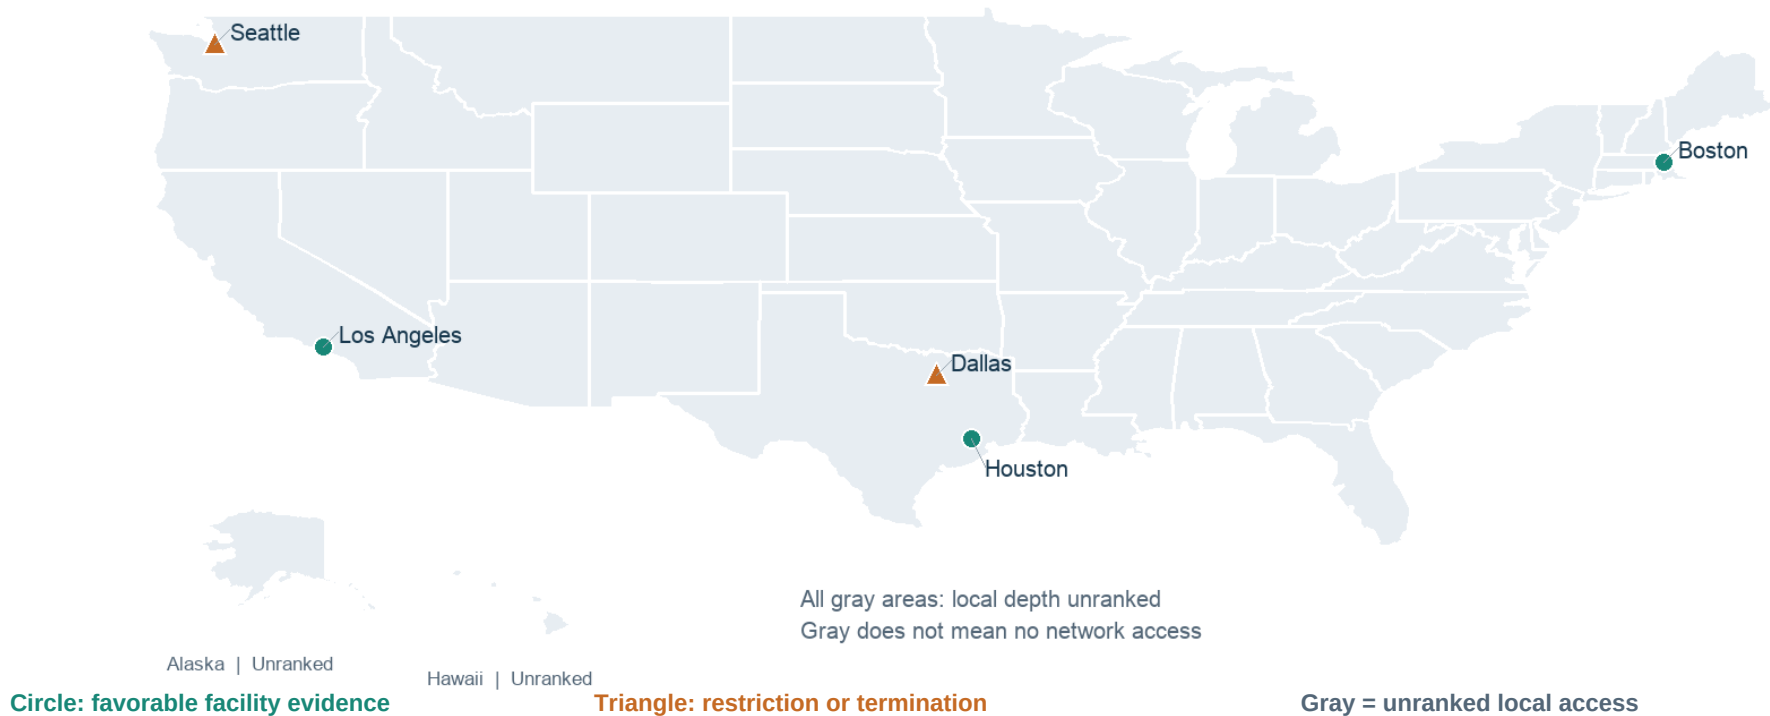

National overview. National PPO access with documented examples on both coasts and in Texas. MedAccess names First Health but its precise network arrangement still needs confirmation. Everest uses PPO discount access alongside fixed indemnity payments.

Where access is better documented. UCLA, UW Medicine, UT Southwestern, Houston Methodist Willowbrook, Broward Health and the Massachusetts General Hospital list provide favorable access evidence in Los Angeles, Seattle, Dallas, Houston, Broward County and Boston. Participation must be checked for the actual product.

Gaps and least certain access. A June 2025 First Health notice terminated Cleveland Clinic facilities and employed providers effective July 1, 2025, including Northeast Ohio and Weston, Martin and Indian River facilities in Florida. Treat these as specific caution locations and recheck for reinstatement; they do not make all Ohio or Florida out of network. The available plan materials do not include a Premier PPO benefit/rate sheet; it is not added as a plan.

Plans: Life-X MM/HSA/VL/PHCS PPO; BMI MVP/DVP/MEC and AFI PHCS use PHCS Extended per guide, exact configuration unverified

National overview. Claritev describes PHCS as a nationwide primary PPO with configurable access. Practitioner-only, ancillary and limited-benefit arrangements can differ substantially from a full hospital PPO. Do not substitute the broader MultiPlan logo for PHCS acceptance.

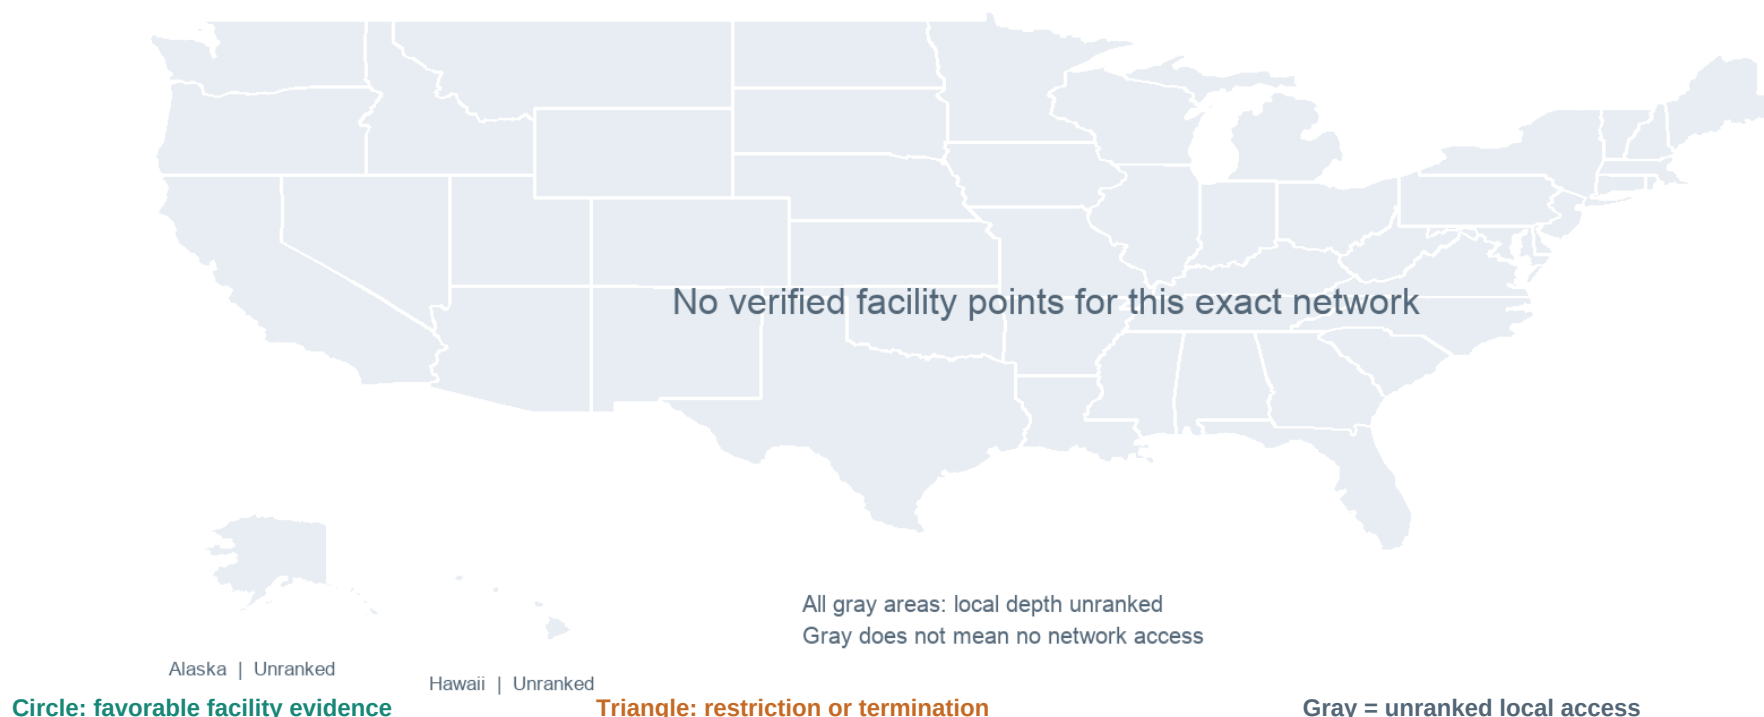

Where access is better documented. Favorable examples include UCLA in Los Angeles, Houston Methodist Willowbrook and Massachusetts General Hospital in Boston. These establish selected urban access points; they do not demonstrate which state has the most providers or confirm a Life-X contract.

Gaps and least certain access. UW Medicine explicitly states that it does not participate in PHCS. UT Southwestern excludes several restricted PHCS arrangements, including limited-benefit networks. Dallas access therefore depends on the exact Life-X network configuration. Broward participation was not established from the current sources reviewed.

PHCS Extended PPO (AFI/BMI designation)

With Amerus | 3 Oct 2026

Plans: AFI 8300/3500 HSA and 3500/4500 Copay; BMI MVP Basic/Value/Advantage, DVP Essentials and MEC

National overview. The uploaded group association lookup guide instructs a PHCS Extended PPO search. BMI brochure says PHCS without a subtype. These labels do not establish that every hospital in a standard PHCS PPO directory participates in the Extended configuration.

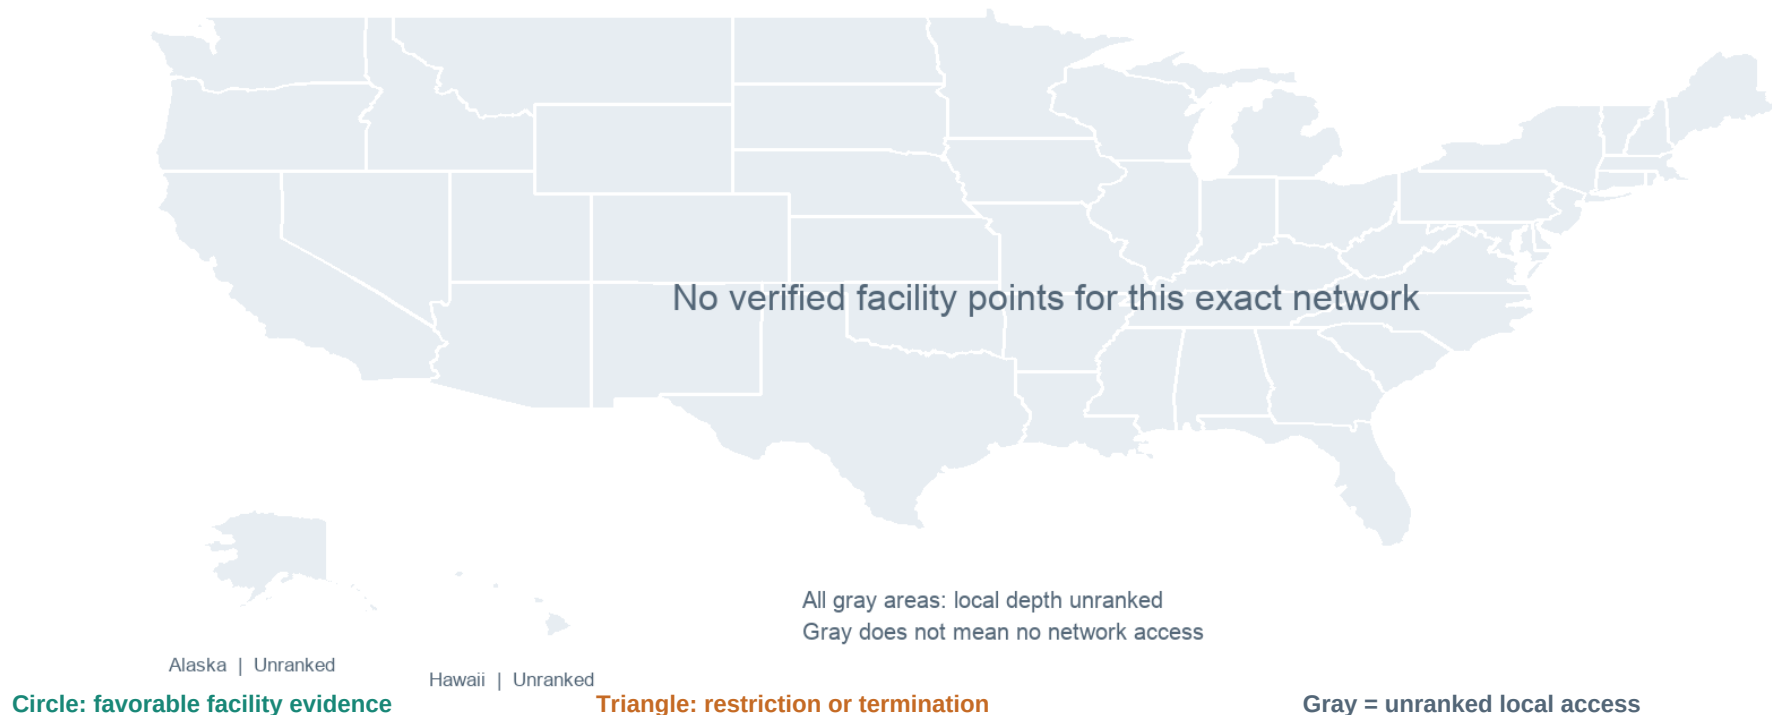

Where access is better documented. Use the exact PHCS Extended PPO selector and search a specific hospital, clinician and specialty. The supplied guide is evidence of a lookup process, not a national provider census.

Gaps and least certain access. No state-by-state density, county coverage or verified hospital list for these exact plans was supplied. This network is not ranked; no state can be labeled uncovered from these files.

PHCS Practitioner & Ancillary / facility reference pricing

With Amerus | 3 Oct 2026

Plans: Vault Bronze 2 and Silver 2

National overview. The Vault schedules name PHCS Practitioner & Ancillary for professional/ancillary services. Hospitals are paid through reference-based pricing at 140% of Medicare allowable amount, outside a contracted hospital PPO network.

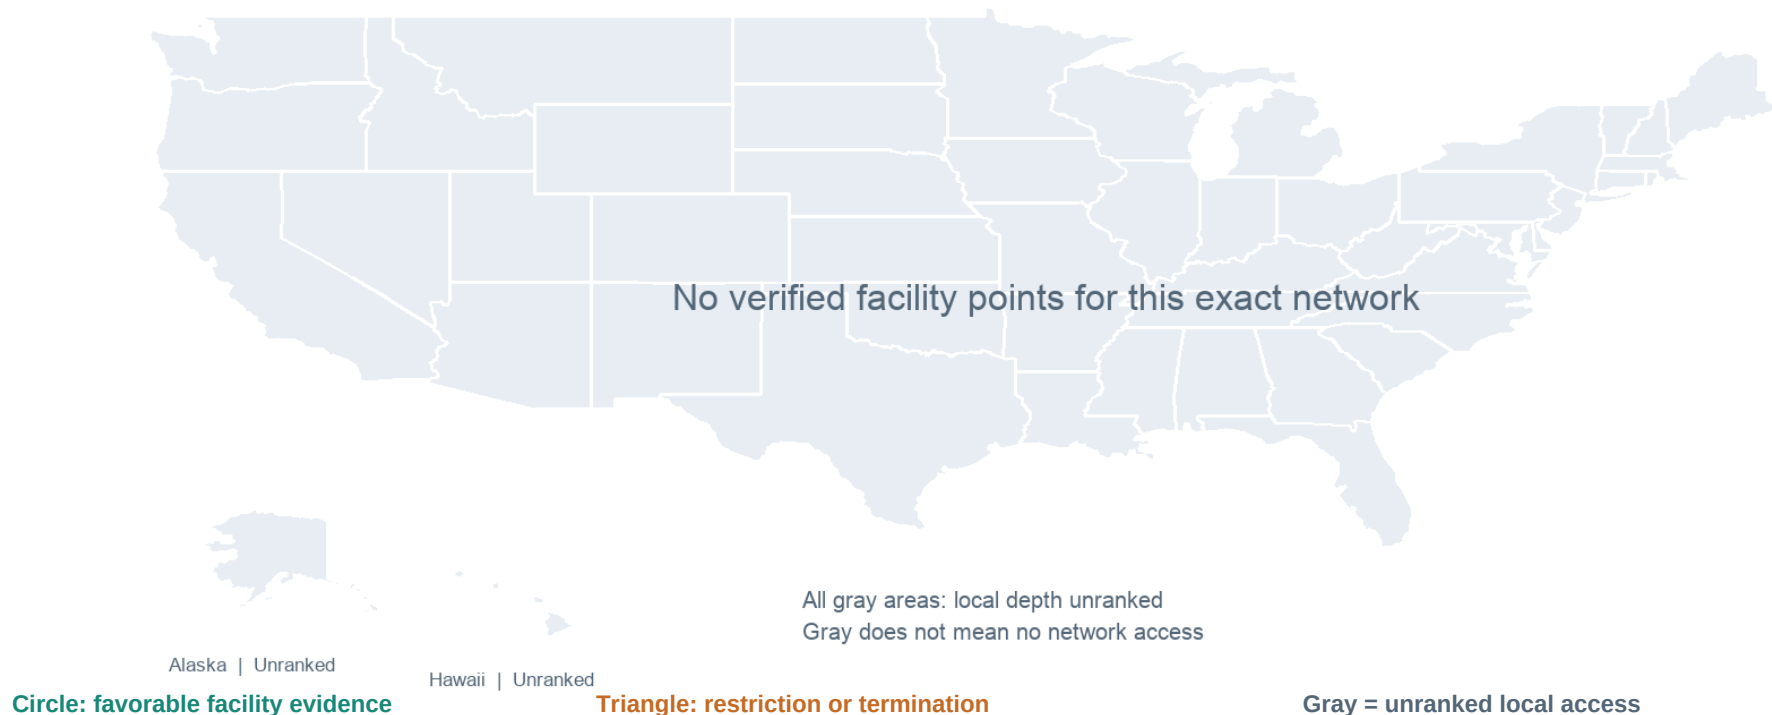

Where access is better documented. The supplied schedules do not substantiate a nationwide list of participating physicians or facilities for the exact plan. Verify physicians individually.

Gaps and least certain access. A hospital may reject the reference payment and balance bill; those charges are outside the stated out-of-pocket maximum. No defensible state coverage ranking or guaranteed hospital access is available.

Vault Elite Plus dual access / facility reference pricing

With Amerus | 3 Oct 2026

Plans: Vault Elite Health Plus

National overview. The schedule names First Health as primary and MultiPlan as secondary for provider access; facilities use reference-based pricing. A First Health logo alone does not establish facility payment acceptance.

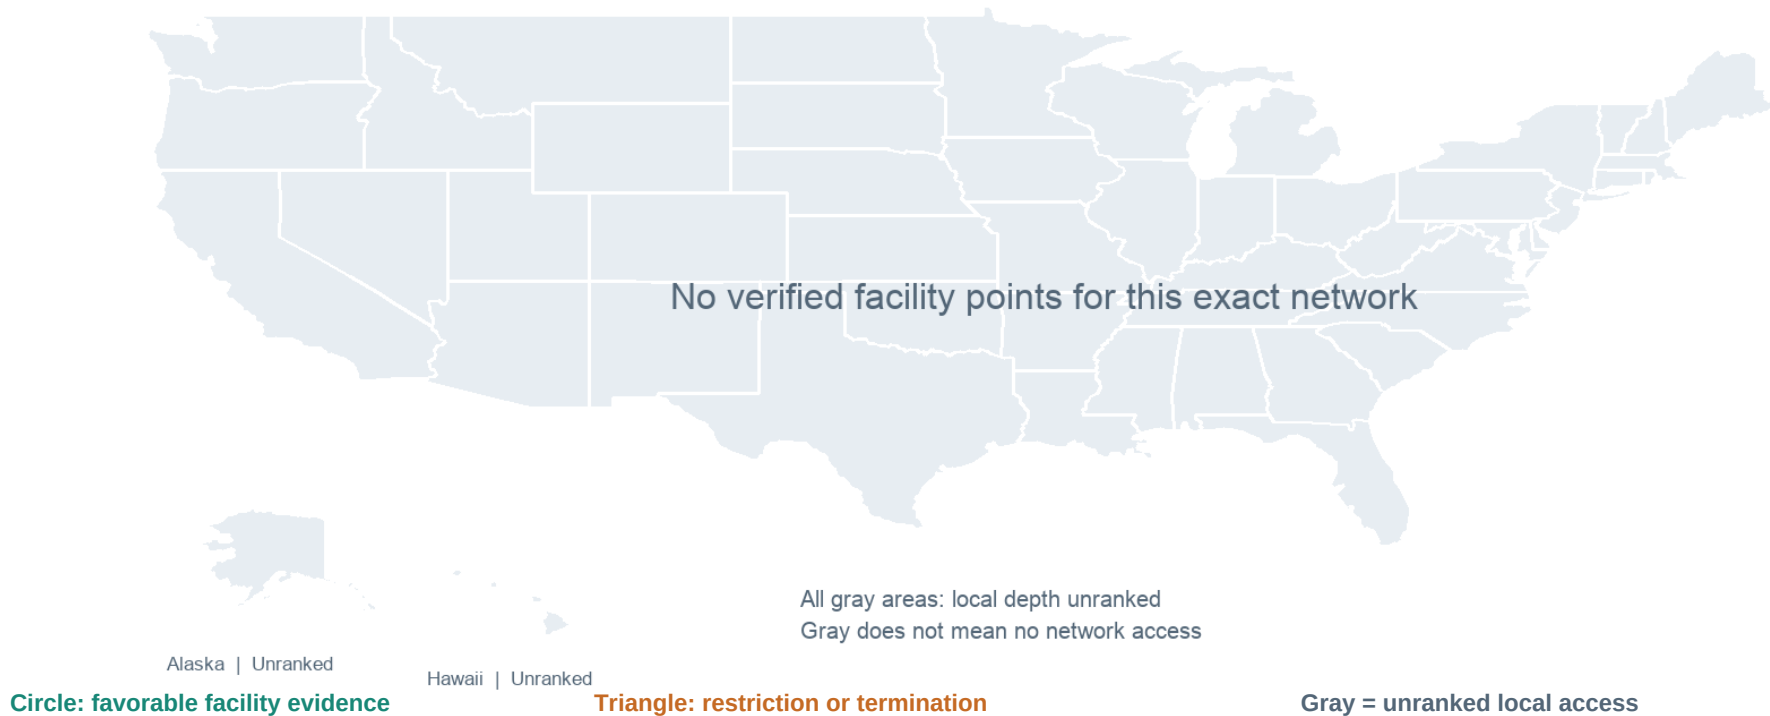

Where access is better documented. First Health selected facility examples are shown on its separate map, but Vault Plus participation for the exact product has not been verified.

Gaps and least certain access. Out-of-network benefits are listed as not covered. Balance billing is possible when a facility rejects the reference payment. The precise secondary MultiPlan configuration and national density are unverified.

Bloom fixed indemnity (no medical network)

With Amerus | 3 Oct 2026

Plans: Bloom Plans 1 through 7

National overview. Bloom is a scheduled fixed indemnity product, not a major medical PPO/EPO plan. No contracted medical provider network is identified or required for its fixed benefit design; a member may use providers broadly, subject to certificate terms and actual provider billing/acceptance.

Where access is better documented. A national in-network footprint ranking does not apply to a fixed cash benefit. Benefits follow the schedule rather than negotiated network cost sharing.

Gaps and least certain access. Payment is limited to the scheduled amount. The member may owe the balance of the provider charge; “can use any provider” does not mean the plan pays any provider bill in full. Confirm any discount arrangements and assignment terms with Lucida.

How to read these national maps

No comparable state-by-state provider counts, specialty counts or drive-time data were established for these exact products. Accordingly, this atlas cannot substantiate a national most-to-least ranking. It maps favorable evidence and specific known cautions without assigning unsupported statewide scores. Rural counties, Alaska and Hawaii remain unranked, not excluded.

Hospital participation lists do not confirm a third-party plan, employer group, individual clinician, service or new-patient appointment. An EPO can exclude routine out-of-network benefits despite a national network. A PPO can offer out-of-network benefits with higher member costs. Fixed indemnity and service limits leave bills unpaid even at a participating hospital. Sales eligibility in a state is separate from provider access there.

First Health termination evidence is dated June 10, 2025 and must be checked for later reinstatement. MGH evidence is from its published accepted-insurance PDF. Other websites were reviewed September 20, 2026. No direct carrier quote, enrollment verification or directory census was performed.
